

**ASP.NET and ASP.NET Ajax:** introduction, creating and running a simple web form example, relationship, generating XHTML code, web controls, sessions tracking.

JavaServer Faces Web Applications:

Java Web technologies, creating and running a simple application in Netbeans, examining a JSP file, event processing life cycle, JSF components, Text vs. graphics components, validation, session cookies, web services

**Guidelines for Project work:**

Exercises based on these technologies

**REFERENCE BOOKS**

1. Deitel and Deitel: Internet and Worldwide Web programming, Pearson
2. Frank Barbier: Reactive Internet programming, ACM Books
3. Tara Calishain: Google hacks, O'Reilly Media
4. Sergei DunaevAdvanced Internet Programming, IT Master

**B.Tech. *Computer Engineering*-SEMESTER III**

<b>CECSC05</b>	<b>CC</b>	<b>Database Management Systems</b>	<b>3</b>	<b>0</b>	<b>2</b>	<b>4</b>	<b>15</b>	<b>15</b>	<b>40</b>	<b>15</b>	<b>15</b>	

**COURSE OUTCOMES**

At the end of the course students will be able to

- CO1: understand fundamentals of database management systems.
- CO 2: design database models and learn database languages to write queries to extract information from databases.
- CO 3: Identify database anomalies and improve the design of database management system
- CO 4: understand transaction management and concurrency control.
- CO 5: understand storage organization and database recovery.

## **COURSE CONTENT**

### **UNIT 1**

**Introduction:** Database management system Characteristics of the Database, Database Systems and Architecture, Data Models, Schemes & Instances, DBMS Architecture & Data Independence, Database administrator & Database Users, Database Languages & Interfaces, DDL, DML, DCL, Overview Relational Data Base Management Systems

### **UNIT 2**

**Data Modeling:** Data modeling using The Entity-Relationship Model – Entities, Attributes and Relationships, Cardinality of Relationships, Strong and Weak Entity Sets, Generalization, Specialization, and Aggregation, Translating your ER Model into Relational Model, Relationships of higher degree.

### **UNIT 3**

**Relational Model, Languages & Systems:** Relational Data Model concepts, Relational Model Constraints, integrity constraints ,Keys domain constraints, referential integrity, assertions triggers, foreign key  
Relational Algebra and calculus, SQL. Database security.

**Relational Data Base Design:** Functional Dependencies & Normalization for Relational Databases, Functional Dependencies, Normal Forms Based on Primary Keys, (1NF, 2NF, 3NF & BCNF), Lossless Join and Dependency Preserving Decomposition, Functional dependencies and its closure, covers and equivalence.

### **UNIT 4**

**Transaction Management:** Transaction Concept and State, Implementation of Atomicity and Durability, Concurrent Executions, Serializability: Testing of serializability, Serializability of schedules, conflict & view serializable schedule.

**Concurrency Control Techniques:** Lock-Based Protocols, Timestamp-based Protocols, validation based protocol. Deadlock Handling

### **UNIT 5**

#### **Recovery System**

Recoverability: Failure Classification, Storage Structure, Recovery and Atomicity, Log-based Recovery, Shadow Paging, Recovery with Concurrent Transactions

**Storage organization :** Indexing, Hashing ,file storage.

### **List of Experiments:**

Following is only a suggestive list of experiments. For better coverage faculty may increase the list of experiments.

**Q 1:** Consider the following relational schema

SAILORS (sid, sname, rating, date\_of\_birth)

BOATS (bid, bname, color)

RESERVES (sid, bid, date, time slot)

**Write the following queries in SQL and relational algebra**

- Find sailors who've reserved at least one boat
- Find names of sailors who've reserved a red or a green boat in the month of March.
- Find names of sailors who've reserved a red and a green boat
- Find sid of sailors who have not reserved a boat after Jan 2018.
- Find sailors whose rating is greater than that of all the sailors named "John"
- Find sailors who've reserved all boats
- Find name and age of the oldest sailor(s)
- Find the age of the youngest sailor for each rating with at least 2 such sailors

**Q2.** Consider the following relational schema:

CUSTOMER (cust\_num, cust\_lname, cust\_fname, cust\_balance);

PRODUCT (prod\_num, prod\_name, price)

INVOICE (inv\_num, prod\_num, cust\_num, inv\_date, unit\_sold, inv\_amount);

**Write SQL queries and relational algebraic expression for the following**

- Find the names of the customer who have purchased no item. Set default value of Cust\_balance as 0 for such customers.
- Write the trigger to update the CUST\_BALANCE in the CUSTOMER table when a new invoice record is entered for the customer.
- Find the customers who have purchased more than three units of a product on a day.
- Write a query to illustrate Left Outer, Right Outer and Full Outer Join.
- Count number of products sold on each date.
- As soon as customer balance becomes greater than Rs. 100,000, copy the customer\_num in new table called "GOLD\_CUSTOMER"
- Add a new attribute CUST\_DOB in customer table

**Q 3:** Consider the following relational schema

DEPARTMENT(Department\_ID, Name, Location\_ID)

JOB (Job\_ID, Function)

EMPLOYEE (Employee\_ID, name, DOB, Job\_ID, Manager\_ID, Hire\_Date, Salary, department\_id)

**Answer the following queries using SQL and relational algebra:**

- Write a query to count number of employees who joined in March 2015
- Display the Nth highest salary drawing employee details.

- c) Find the budget (total salary) of each department.
- d) Find the department with maximum budget.
- e) Create a view to show number of employees working in Delhi and update it automatically when the database is modified.
- f) Write a trigger to ensure that no employee of age less than 25 can be inserted in the database.

#### Q4: PROJECT

Students are required to develop a DBMS for the applications assigned to them. Following items are required to be submitted for the project

- a) Problem Statement
- b) ER model/ Relational Model
- c) Integrity Constraints implemented
- d) Suitable Queries to create and manage database

Note: Students have to make sure that they have defined proper integrity constraints to ensure consistency of database used in assignments as well as project.

#### SUGGESTED READINGS:

##### Text book:

1. Korth, Silbertz, Sudarshan, "Data base concepts", McGraw-Hill, 2013

##### Reference books

1. Elmasri, Navathe, "Fundamentals of Database systems", Addison Wesley, 2010
2. Date C.J., "An Introduction to Database systems", Addison-Wesley Longman, Inc., 2004
